In June of 2014, Autodesk's AutoCAD software surpassed 90 million licenses sold, making it the most widely used desktop CAD software in the world.[1] The software has been used in the design of over 130 million buildings and 1.4 billion miles of infrastructure, including homes, roads, bridges, tunnels, railways and airports.[2] AutoCAD also serves as an engineering software and can be used for many other types of design, including 3D modelling, mechanical, electrical, civil and mechanical drafting. AutoCAD starts with a black screen showing the drawing area with some shapes and text. At the bottom is a readout of the drawing area and a measure bar.[3] A CAD operator (user) can customize the size of the drawing area by clicking on the top left corner of the screen. The drawing area can be set to the full width and length of the current screen. The screen will automatically adjust its size when a new design is started. At the bottom of the screen is a dropdown menu. It is where the drawing modes can be chosen. The two most common are Drafting and Layout. Depending on the drawing mode the software will display different information on the screen. Drafting Mode Drafting mode is the default CAD mode and it will automatically open to the full screen. You can add entities to the drawing area or start another drawing. If you are viewing the drawing area, you can move entities using a white arrow marker and resize them using the measure bar. To create entities, use the right mouse button to draw a rectangle or a circle using the coordinates displayed on the screen. The entities are drawn as solid shapes, but you can add a dashed line. If you have the Quick & Draw toolbar displayed, you can draw lines, polylines, arcs, splines, circles, ellipses, and text using a keyboard shortcut. If you use the annotation tool, you can insert text, arrows, and rectangles. If you press the T key, it will automatically select the tool that you are using (the arrow, pen, or text). To delete entities, use the Delete key. You can also select and delete parts of entities. This is done using the L key. When the entity is selected, click on the Delete key. To start a new drawing, use the key. You can also use the
