### What's New in the AutoCAD?

Getting feedback is easy—just send your design to a CAD user who is currently drawing on a different application. The user can export the feedback to a file (PDF, image, etc.) and load it directly into AutoCAD. Drag a layout onto a text box or shape, and AutoCAD automatically formats the text box as a columnar or tabular layout. Visitors can collaborate with your designs and communicate with other users through intuitive, high-fidelity web-based and mobile apps. Up to four screens can be switched in and out of an interactive 360° layout using the AutoCAD Viewer app. (video: 1:10 min.) Templates: A template can be customized with hundreds of predefined objects, including furniture, components, and parts, so that you can quickly design any furniture project. Use the new Organizational Templates feature to quickly organize your drawings into multiple subfolders. The latest toolset: Extended commands and automation: More commands and tools can be accessed quickly by using the new Commands bar at the top of the screen. The new Outliner workspace is a powerful tool for organizing and exploring complex designs. The new toolkit is a simplified way to perform drawing and command tasks, making it easier to create in-place drawings and automate repetitive processes. AutoCAD Cloud: Save time and space by storing, viewing, and managing design data using the cloud. Autodesk 360: Take a 3D tour of designs and automatically create a live, 360-degree walkthrough of the CAD model. Sketch and BIM apps: With AutoCAD for Autodesk Sketch and AutoCAD for Autodesk Revit, you can create and edit 2D and 3D designs right in your web browser. eDrawings: You can access, edit, and share designs through the cloud with eDrawings, a web-based software for creating 2D and 3D drawings.
