What's New in the AutoTest Studio?

AutoTest Studio is a software solution intended for automating the execution of test cases, and therefore, for assisting users in the creation of functional and regression test scripts. One of its principal features is the creation of test cases based on reusable code, which can be compiled by a programmer. The software can be incorporated in a test management process, where its features have been integrated with an end-user toolkit. The program itself can be used for test automation with several of the provided task-oriented tools. In addition, users can utilize a data dictionary for storing all of the project's information, and that of the test cases. Key features:

- The integration of pre-written test cases to make them reusable (in the form of sample data)
- Automation of the execution of the test cases, with the inclusion of test data/Python package management and test data dictionary management.
