Fomivirsen, a phosphothioate-containing oligonucleotide, is a potent inhibitor of herpes simplex virus type 1 (HSV-1). Treatment of fetal rhesus monkey (Macaca mulatta) kidney (FRhK-4) cells with fomivirsen at concentrations of 1 and 10 microM reduced HSV-1 viral titers by 4 logs and 90%, respectively. In a mouse model of HSV-1 eye infection, fomivirsen at a dose of approximately 10 mg/kg given as an eye drop 4 times daily reduced the number of HSV-1-infected eyes by more than 99%, and the number of herpetic lesions by more than 99.9%. The results show that fomivirsen is highly effective in vivo, even in the treatment of a primary ocular infection. Inhibition of HSV-1 by fomivirsen was due to a reduction of the viral yield rather than inhibition of entry or the subsequent replicative phase of infection. Fomivirsen was effective in the treatment of a genital infection, too, with a reduction in the number of HSV-1-infected blisters after topical treatment. Thus, fomivirsen shows promise as an effective treatment for ocular and genital HSV infections.The Federal Communications Commission (FCC) is crafting new rules to protect net neutrality - which is the idea that all content should be treated equally by internet service providers (ISPs). This is an important step in making sure Americans are not treated like cattle by the greedy hands of the internet. But the FCC has pointed out that over 3 million comments have come into the FCC, and they expect up to 6 million people will be involved in the net neutrality controversy by the time comments expire on November 4. Mashable has taken a look at some of the best comments from Reddit's r/technology and r/netneutrality. The original trailer of the game was shown last month, revealing that the 3e33713323
