Colour Spy I Is It Software or Hardware? Colour Spy I Is It Software or Hardware? Welcome to What The Tech videos, where we explore both the advantages and disadvantages of using technology. In our first video, you'll learn what a digital asset is. "So what is a digital asset? A digital asset is something you put data into. And it's capable of surviving something being taken away from it. If I have a digital asset, I can lose access to my email, and I can still have access to the content that's on them. They're capable of surviving being taken away in a lot of cases." In the US, we're legally required to keep our digital assets for seven years. If a company downsizes or closes, the assets remain in place for safe keeping, and they're sometimes the only way to actually close a case. So the concept of a

What's New in the Colour Spy?

Imagine having a randomised colour swatch generator on your desktop. Well, that's what you can get with Colour Spy. Just point to the colour

you want from any window on your screen and choose Copy or Clone. Just copy the new colour you want and paste it into any HTML editor or graphics editor. Now with Colour Spy you don't need to search for the exact Hexadecimal code or decimal value of the colour you want. You just point to any colour and the Colour Spy will provide you with the RGB code. This is very useful in web design. You can easily pick a colour from any web page and use it in your website.
