It was featured on CNET's Download.com and it worked flawlessly. The problem was that it showed problems with the software, but the problem seems to have been resolved. Unfortunately I never received an update to the software, so it's kind of discontinued. I would still recommend anyone wanting to see the installed programs on a computer to download this software. It's still available for download. Ricardo Simoes 2011-04-03 Score 4/5 Hello all, Currently they have released new updates for this program, but we can all agree, there is no support left for this app. There is no update for it within the program's page at the download section for versions 10, 11 and 12. So I suggest you to download this older version, if you want to see the program (it's free anyway) and if you have found a new version of it. I'm not sure if they have updated versions 14 and 15 (I don't know if it was ever worked on that versions) because it isn't anymore there at the download section. But I hope this can help you. Regards. Ricardo Simoes 2011-04-02 Score 4/5 After reading the testimonials, I finally downloaded it, however, what the program says is just bogus. The "Version" of the software is "6.26
