M4A Cutter Comments:Q: .NET Memory profile I have performance problems. I think the reason is that I use a lot of memory for idle objects. If I run the program on the same instances of my object, the memory usage is very small. If I use new objects and recycle the old ones, then the objects uses a lot of memory. How can I trace the bad behavior? How can I delete objects from memory? A: You can right click on the .NET memory window and choose "show objects by size" or something like that. That will at least tell you which objects are big. You can then "put an eye on" one of these objects and look at what's going on inside. For larger or more complicated objects you should use tools like the .NET memory profiler in Visual Studio. It doesn't take a specialist or high finance wizard to work out that the Panama 09e8f5149f
