The following are some of the most important features of Photoshop: Copy and paste: Copy is the most basic operation that we perform on images. It allows you to move, copy, and paste an image or text to another area on your computer. Enhance your images and create new ones: Enhance allows you to adjust the saturation of colors and other details. Adjust color: Adjust color allows you to lighten, darken, or balance colors. Change, crop, correct, and retouch: Change, crop, correct, and retouch allow you to crop an image to only capture a specific area of a picture, correct an image with another, or even change a picture to another completely different image. View your images: View is what makes Photoshop special because it allows you to see what your image will look like when it's complete. Draw: Draw is a tool that helps you easily create a variety of brushes, tools, and objects. Enhance Your Images You can enhance

your image, commonly referred to as processing the image, by using different tools that affect the appearance of the image such as changes in color, brightness, or contrast. Increasing and decreasing contrast When you increase contrast, you play with the light and dark aspects of an image, changing colors and darkening or brightening an image. You can also decrease the contrast, which softens the image and makes it more blurred and less sharp. In the next steps, you can find out how to increase and decrease contrast. We highly recommend you download the free trial version, available at www.adobe.com/products/photoshop/tutorials.html. It comes with all the tools and techniques that you need to complete many of the techniques in this chapter. Here's an example that illustrates how to increase contrast: 1. Select the area of the picture that you want to process. In this example, we selected the tree and leaves by highlighting the area of the picture with a black Magic Wand and choosing Selection⇒Modify⇒Contract from the top menu. 2. In the Modify⇒Adjust

Color⇒Contrast menu, select a Contrast setting from the menu (see Figure 13-1), and then increase the slider to a higher Contrast setting. The Contrast slider is a control that determines the lightness and darkness of your image. As you increase the Contrast

Q: Cannot get ogr2ogr multi-trace shapefiles I am trying to write GeoJSON to SHP using command "ogr2ogr -overwrite -dialect sqlite -f GeoJSON road-verts.json road-vertices.shp" and get error: ERROR 1: FFT is not supported by SQLite. FFT is not supported by OGR so you will get bad results. Specify 'ogr2ogr -nogrsf_tile -t_srs EPSG:4326'. My questions are: how can I switch off FFT? how can I get geoJSON which is formatted without "T" column? (I need it for my map) A: The -t_srs option in ogr2ogr is for generating a KML file. You are probably looking for the -t_srs option of sqlite: and do not have the -t_srs option in your command In this file, you find also an introduction how to convert GeoJSON to sqlite. To get rid of the T-column, you should just remove the offending entry in the GeoJSON file. import logging import os import pytest from artisan.client import ArtisanClient from.examples import Main as

basis.There was no Maori involved in the designing of the statue, but the story behind the new statue is a Maori one. It's the story of Annaulani. Twenty years ago, she was a teacher, working at a school in the Wairarapa. Annaulani's story is all about a young girl who believed in herself and found the strength to make something out of herself. "The significance of this statue is the fact that we have a student who understands that Maori teachers have started to work," Annaulani said. "Before this statue was built I was still a young student. I felt like I was really inferior."
