The "Create lesson" option will be on the top of the page. Choose a lesson and you'll be taken to the lesson's screen. There's a math box in the bottom left corner of the page which holds the currently-selected lesson. There are three types of lessons: • Determinants • Linear equations • Vector spaces You can select a lesson and begin a new lesson using the "Create lesson" option in the top right corner. The lessons have clearly-written descriptions and instructions for each lesson. The "Create new lesson" option is available in the top left corner of the page. A lesson can have up to 5 input fields, with each field acting as an equation that you can use to solve a problem. In the lesson's screen, you can move back and forth between the equation and the equation's solution. You can choose to display the solution next to the equation, or in a different box at the bottom of the screen. In order to solve the equation, you can choose a method from the bottom of the screen: • Step by Step • Wolfram Alpha • Solve It There's also an option to type in an equation directly into the equation's box in the bottom left corner. Some of the lessons allow you to choose between two different methods for solving the equation: • Explicit and Implicit • Direct and Indirect • You can enter multiple equations for a single lesson. The lesson's screen will be updated to show the results of your equation. Click "Create" to save the new lesson and return to the list of lessons. When you're done, you can click "Clear" to clear the math box and return to the lesson screen. There's also an option to directly export the lesson to Word or RTF.
