Carbon nanotube-based nanocomposites are considered as promising materials for energy conversion and storage applications. However, the influence of dispersed nanoparticles on the macroscopic mechanical properties of these carbon-based composites remains poorly understood. Here, we study the impact of small gold nanoparticles on the mechanical properties of carbon nanotube bundles. A combination of three-point bending tests and atomic force microscopy is used to quantify the impact of gold nanoparticle entrapment on the apparent Young's modulus of the nanocomposite. We show that at nanoscale the gold particles are effectively embedded in the bundle and have little influence on the nanoscale distribution of stresses and strains. When considering macroscale phenomena, however, a significantly increased ductility is observed, which is attributed to a change in the nanoscale distribution of stresses and strains within the bundle. We show that these changes cannot be explained by a straightforward scaling of Young's modulus based on the nanoparticle volume fraction. Instead, the altered macroscopic stress-strain curves are best explained by a modified continuum mechanics model that takes into account the size of the entrapped particles. In particular, the entrapped particles are shown to result in significantly higher modulus of the bundle surface layer.Risk factors for failure of the first trimester combined screening test (nuchal translucency and serum free beta-human chorionic gonadotropin). To determine the risk factors for failure of the first trimester combined screening test (cFT) in a hospital-based screening programme. The screening results of 1824 pregnant women, between 7 and 13 weeks of gestation, who had undergone screening between 1 September 2008 and 1 February 2011 at the Department of Obstetrics and Gynaecology, University Hospital of Heraklion, Crete, Greece, were analysed. The results of the cFT and the diagnosis of fetal anomaly or chromosomal abnormality, as well as the results of obstetric ultrasonography were collected. A logistic regression model was used to investigate the association between various maternal, obst

What's New in the WinX2D?

X2D is a simple utility for modifying AVI file headers and it becomes useful whenever you need to play XVid compressed file using DivX codec. There are two downloads available: Windows GUI and Console version. The former has more features while the latter is for console lovers. 1.1.9.9 Version: 1.1.9.9 (New) Updated on: 06/02/2010 Release Notes: 1.1.9.9 is a new build and is available with a number of new features and bugfixes. Among the new features is an improved capability for handling files with invalid XVID headers. Thanks to our friends at s2video.org, X2D now supports the 'XVID_LO' bits in the flags byte of the XVID header. Previously, X2D required the XVID_HN -XVID_LO bits to be zero in order to use these header flags. However, if any of the flags were set, X2D would report an error and fail to read the header. Now, all such headers are detected and treated properly. Other features include: • Support for using extended filter lists in multiple filter mode • Support for writing multiple AVI files into single AVI file • Support for multiple subtitles, with different styles • Resizable subtitles • Message: Pause/Play buttons are now resizable • Can now create/open/save files using alternative encoders • Implemented JPEG thumbnail support • Ability to create/open/save AVI/XVID files using FreeType library • Many bug fixes Updated on: 08/26/2008 Release Notes: 1.1.9.8 Version: 1.1.9.8 (New) Added: • Now X2D can be run from any directory. Previously you had to run it from the same directory as the file. • Can now read any unknown AVI file type. Previously you could only read files with an XVID header. • Can now handle filenames with the following extensions:.avi,.avi.wmv,.wmv,.avi.divx,.avi.mp4,.avi.xvid • Can now read the following subsets of mpeg streams: matroska • Can now detect multiple subtitles and apply correct color palette on each • Can now detect XVID_HN and XVID_LO bits in the XVID header • Can now create/open/save AVI/XVID files with zero frame skipping • Can now create/open/save AVI/XVID files with alternative encoders Updated on: 10/05/2007 Release Notes: 1.1.9.7 Version: 1
