For example, U.S. Pat. No. 4,786,907, assigned to Xerox Corporation, discloses one such scheme, wherein print data associated with printing a multi-page document is stored in a buffer for subsequent analysis. As indicated in the patent, the page-to-page print data, including, for example, the specific pages that contain each particular advertisement, can be identified by analyzing the print data. This can be done either by inserting the advertisements at specific locations in the document, or by modifying the document so that, at any particular position on the pages, the line of print data will identify those pages that contain the advertisements. In this way, the advertisements can be processed through various image processing and printing functions. The above-identified Xerox patent is incorporated by reference as if fully set forth herein. By way of a further example, U.S. Pat. No. 4,903,065, assigned to Xerox Corporation, discloses a scheme of linking particular advertisements to particular pages of a multi-page document. This is accomplished by inserting the advertisements at specific locations in the document. In this way, the advertisements can be processed by various image processing and printing functions. The above-identified Xerox patent is incorporated by reference as if fully set forth herein. A disadvantage of the above-identified schemes is that the multi-page document is reworked before it reaches the final stage, namely, the printing or copying thereof. This inevitably results in undesirable delays in the processing and printing of the document. Furthermore, inserting advertisements in the document, which is carried out in the course of the printing or copying operation, can result in printing disturbances and can adversely affect the quality of the printed copy. Another disadvantage of the above-identified schemes is that the documents containing the advertisements must be printed in the presence of the advertisement. This increases the cost of the printing of the document, since the presence of the advertisements usually requires special paper and ink. Moreover, where the document is ultimately printed on a photocopier, the advertisements are provided on the photoc 3e33713323
