Some theoretical physics texts connect the Maxwell's equations to the partial derivatives by suggesting that the derivatives of \mathbf{E} (or \mathbf{E}_S) are expressed as $\frac{\partial \mathbf{E}}{\partial x} = \mu \mathbf{E}$ (or $\frac{\partial \mathbf{E}}{\partial x} = -\epsilon \mathbf{E}$). How is that possible? I think the equation $\frac{\partial \mathbf{E}}{\partial x} = \mu \mathbf{E}$ is obvious, the equation $\frac{\partial \mathbf{E}}{\partial x} = -\epsilon \mathbf{E}$ is not so intuitive. A: They are indeed related. It's just that the relation between them is quite complicated. The most important point to note is that the electric field does not always satisfy the wave equation (or even the partial differential equation, which is equivalent). The electric

field changes quite rapidly over distances that are large compared to the wavelength of the light. This means that the standard solution

JPicEdt For Windows

· A simple graphic editor with a syntax similar to the one of the "gnuplot" program. · A lexical analyzer for LaTeX's picture environment. · Both of these facilities are extremely powerful and extremely easy to use, yet simple. · The syntax for symbolic macros and for the languages used by GnuPlot is convenient and simple. · A very efficient graphic library which produces vector-graphic output, including EPS and BMP. · A current list of supported features is available at wget is recommended to be installed (see "INSTALLATION NOTES", section "INSTALLATION NOTES"): To get the current version of jPicEdt, type in your shell: `wget` To get older versions, see [You](http://wget) have to compile it with the GNU C compiler. To do this, you must install it in your shell. Type in your shell: `wget tar jxf gcc-3.4.tar.bz2 cd gcc-3.4/ ./configure make make install` You may not find this in your PATH. To find out where you should put it: `ls /usr/local/bin | grep gcc` You may have to download it first: `wget ftp://ftp.gnu.org/gnu/gcc/gcc-3.4.tar.bz2` If you want to use jPicEdt version
