Top AutoCAD Facts AutoCAD is a commercial CAD application that is used by architects, mechanical, civil, electrical and construction (MEC) engineers, facilities managers, and electrical and instrumentation professionals to create technical drawings. About AutoCAD: AutoCAD is a multi-platform application, with both desktop and mobile apps. The AutoCAD 2019 software enables users to create, edit and manage drawings, graphs, tables and other drawings on local or remote computers using the internet. It is available in 64-bit, 32-bit and 64-bit for Windows operating systems, on macOS, and for iOS and Android on mobile devices. Because of its unique functionality, AutoCAD is able to transform the design process, creating a process called "predictive design" that improves the efficiency and accuracy of design projects and cuts the costs of design projects in half. It is primarily used by architects and engineers, but it has been extended to other industries as well. AutoCAD features: AutoCAD is capable of many functions and features, including the following: Creating, modifying, deleting, and organizing drawings. Support for drafting objects, drafting styles, and drafting layers. Support for precise engineering and architectural (PE and EA) functions. Creation of drawings with extended drawing blocks. Creation of 3D drawings. Creation of 2D, 3D, and 4D architectural models. Creation of 3D, 4D and surface texture models. Importing and exporting of drawings and the CAD data they contain. Creation of intelligent formulas. Creation of animated graphics and more. Ability to work with all types of drafting tools (dial, contour, hatch, labeling, etc.) and building objects (i.e. walls, floors, columns, pipes).

Open the Autocad and start working. Q. Inverse of matrix with vectors of specific vectors Let $SA \in \mathbb{R}^{(m \times n)}$ be a matrix and $S\text{matheal}[A] \in \mathbb{R}^{(n \times n)}$ be a diagonal matrix. The vector $S\text{mathbf}[x] \in \mathbb{R}^{(n \times 1)}$ is a vector of the following form: $S\text{mathbf}[x] = \sum_{i=1}^n \text{mathbf}[v]_i \odot \text{mathbf}[v]_i$, where $S\text{odot}$ denotes the Hadamard (element-wise) product and $S\text{mathbf}[v]_i \in \mathbb{R}^m$. Furthermore, $S\text{mathbf}[u] \in \mathbb{R}^m$ and $S\text{mathbf}[y] \in \mathbb{R}^m$ are also vectors of that form. I want to calculate the inverse of the matrix $SA + \text{matheal}[A] \text{mathbf}[x]^T$, i.e. $SSA + \text{matheal}[A] \text{mathbf}[x]^T = \text{mathbf}[y]^T$. This is easy, as $SA + \text{matheal}[A] \text{mathbf}[x]^T$ is a rank-1 matrix: $SSA + \text{matheal}[A] \text{mathbf}[x]^T = \begin{bmatrix} \text{matrix} \text{mathbf}[y] \text{mathbf}[y]^T & 0 \\ 0 & 0 \end{bmatrix}$, whereas the right-hand side is the matrix $SS\text{mathbf}[y] \text{mathbf}[y]^T = \begin{bmatrix} \text{matrix} \text{mathbf}[y]_1 \text{mathbf}[y]_1^T & \\ & \text{mathbf}[y]_1 \end{bmatrix}$
