Its success lies in its adoption of technology that was developed to address the requirements of architecture and engineering clients.

AutoCAD is installed on more computers in businesses and homes than any other desktop application in history. It is used by architects and engineers as well as designers of other products, in design departments, manufacturers, as well as anyone needing

CAD or drafting. AutoCAD integrates seamlessly with Autodesk® AutoCAD LT and AutoCAD LT for Windows and AutoCAD LT for Autodesk Inventor. It is also available on iOS, Android, Windows, Mac, and other platforms. It is one of the oldest and most successful desktop CAD applications on the market. In 1984, Autodesk introduced AutoCAD, a DOS-based desktop application that could be used on a workstation running DOS or Windows 3.1. It required the use of a Graphical Device Interface (GDI), and when the integrated GDI library was included, it became a multi-user application. Over the past 40 years,

Autodesk has evolved AutoCAD to meet the needs of the architectural and engineering professions and to help maintain its success. AutoCAD 2018 introduces more than 100 enhancements and more than 2,400 new features. Some features are simple, such as customizable toolbars and application windows. Other features are more complex and unique, such as workflows, new tooling and the ability to dynamically update the drawing while it is being worked on. AutoCAD – It's All About Innovation In 2014, AutoCAD won Autodesk's Fastest Growing Product award for three years in a row. It is one of the most widely used products in the Autodesk portfolio, and its continued growth is a testament to AutoCAD's engineering, architecture, and design workflow capabilities.
