Installation What is it? The AutoCAD is a 2D drafting program designed for creating 2D shapes and 2D drawings in various geometric forms. You can create a 2D design by entering precise measurements or by typing commands to draw a 2D shape.

You can enter these commands by typing or by clicking icons on the screen. The AutoCAD command line provides an alternative way to create a 2D design. This means that you type commands on the command line to create the 2D design. The command line provides an alternative way to create a 2D design. External scripting languages. AutoCAD supports several external scripting languages: AutoCAD uses VBScript for scripting.

The code must be developed and compiled to a file (cscript.exe), then executed. AutoLISP or AutoVP, is used to extend AutoCAD capabilities through the AutoLISP programming environment, which is similar to Visual Basic. AutoLISP was the default scripting language for AutoCAD until version 10. AutoLISP can be used to script AutoCAD commands or even add new commands. AutoCAD can be scripted using the .NET Framework. ObjectARX, is a C++ class library. It is a common base for applications that run in AutoCAD. AutoLISP AutoLISP was the first of the external scripting languages supported by AutoCAD. The script is written in text files. It is an interpreted, high level language, similar to BASIC, but with a few more features. AutoLISP is one of three AutoCAD External Tools scripting languages that require the use of a separate "cscript.exe" command-line compiler to convert the script to a binary executable. Like Visual Basic Script, it is a high-level, interpreted, dynamic programming language that runs in the Microsoft Windows operating system, which is commonly used by AutoCAD users. AutoLISP supports up to 64,000 script commands (commands are also called "functions") or actions. By default, the AutoLISP functions execute one after the other. A feature known as function calls allows functions to be called in parallel (that is, several functions can be executed at the same time). This language was replaced by VBScript in AutoCAD 2000 and later releases. AutoVP The newest, most powerful script is AutoVP or AutoVP Professional. AutoVP is a proprietary programming language that runs under the .NET Framework on Windows platforms. It can run AutoCAD commands or add new AutoCAD commands. It has a scripting engine that works faster and more effectively than that of the previous AutoLISP version. AutoVP supports hundreds of thousands of actions or AutoCAD commands.
