* _It comes on every Mac, and is included in the newest version of every major Apple operating system. _ * * * Creating a Text File Regardless of whether you plan to use Photoshop to create an image or to manipulate an image, I encourage you to first create a _text file. _ A text file is a plain, text-based document that can be saved and opened in any text editor. By opening an image and carefully creating a text file from it, you can save time and keep yourself from redoing anything later. Create a text file by first choosing File⇒New, or by clicking the New button on the Files panel (see the bottom of Figure 8-1). Figure 8-2 shows the New dialog box, where you enter a file name. You can also type a title in the Text box. File naming conventions are important to remember, and I discuss them in the next section. Photoshop saves files in the Photoshop format. Text editors in the macOS operating system don't recognize Photoshop files, so you need to save them in this format. I use the Text icon in the New file dialog to save the image as a text file that I can then open in a text editor, such as TextEdit, Pages, or iA Writer. FIGURE 8-1: Select the File menu and then click New, or press Shift+N. FIGURE 8-2: Create a new text file by entering a name and a title. You can create a text file by opening an image in Photoshop and then choosing File⇒Save. However, the easiest way is to use the Save As dialog box, as shown in Figure 8-3. FIGURE 8-3: Choose Save As from the File menu, or press Shift+S to open the Save As dialog box. Many steps in the following text-editing process resemble steps in the Image Export dialog box (refer to Figure 8-1, earlier in the chapter). But I don't bother with that box's often-confusing features. Instead, I explain the process for creating a text file in Chapter 21. Figure 8-4 shows a sample text file. It's a typical file created from a color photo. FIGURE 8-4: Create a text file from an image by using the Save As dialog box. When you create a text file, you save it with the Photoshop File format

This review will show you how to use Photoshop Elements to edit and create an entire image from start to finish. How to work in Photoshop Elements First, let's talk a little about how the different tools work. There are quite a few different tools available in the software, so it's important to know how each works. Text and Spelling The tool in the image above is a simple tool, but it can also be used to include text into an image. You can use this tool to select areas of your image to put text in and edit the text that is already in the selected area. You can also use this tool to select text from a text document and insert it into your image. For instance, you can place the text in your image "Hello," "I love you", or "Are you there?" and move it around the image. You can use the tool to perform simple things, but for more complex tasks you will need to use the tool. Word Art Word Art is the simplest tool in Photoshop Elements. You can use it to add text boxes to your images. You can insert text and just edit the font size and color. The tool also comes with a few pre-made font styles so you can quickly change the look of your text. Blur and Fade Effects The tool above can be used to add a subtle blur or fade to any area of your image. You can use the tool to blur your image and then change the amount of blur to make it look like the object in the image has moved slightly. The tool above can be used to edit the size and location of the blur. You can use the tool to create a blurred image that fades from white to black. One of the best use cases for this tool

is to create the effect seen in the image above. Adjust Color Tools You can use the tool above to change the color of an area of your image. The tool provides many different color selection options, allowing you to select colors from your image and input a new color to use. You can use the tools above to change the color or select a color from your image. Gradients The tool above will allow you to create a gradient by using color selections to create a [388ed7b0c7](#)

1. Field of the Invention The present invention relates generally to a device and method for filling a container. 2. Description of Related Art Various techniques have been used to prevent beverage spills and to purify a beverage such as a coffee beverage or a soft drink. Coffee may be presented in a beverage holder having a cup element for holding the beverage and a lid element for covering the cup element. The cup element may be formed from a paperboard material. The lid element may be formed from a material other than paperboard, such as a plastic material. The cup element may be formed by the structure disclosed in U.S. Pat. No. 6,073,802 to Schirmer et al. which is hereby incorporated by reference in its entirety. Many beverage holders include a straw element for drinking the beverage through the holder. The straw element may be separate from the holder and include a straw cup with a handle, with an optional straw holder element. Alternatively, the straw element may be directly integrated with the cup element of the beverage holder. The straw element may be composed of a paperboard material. The lid element may be formed by the structure disclosed in U.S. Pat. No. 6,517,061 to Schirmer et al., which is hereby incorporated by reference in its entirety. It would be desirable to provide a device and method for filling a container. The LA Galaxy and the Colorado Rapids were both trying to win their respective game, but they are both suffering the consequences. Colorado were inspired by a last-minute own goal from Galaxy goalkeeper Brian Rowe to come from behind to beat LA 2-1 in a game that was tightly-contested, but also ended up one of the most exciting in MLS this season. "This is an exciting time of the year and to come out of Colorado and get a point is really good, especially at home," said LA head coach Sigi Schmid. It was the first time Rowe suffered a home defeat in MLS after 11 games and the Galaxy have an indifferent start to the season with only one win in four games. But LA have now lost in three straight home games - two to Atlanta and the Rapids - and the forwards' inability to break through the Colorado defense has been critical. "We're in a moment now where we're really in a position of trying to establish our standards and our rhythm," Schmid said. 

* **Rectangular Marquee:** This tool gives you a rectangular selection for moving or copying an image. * **Flood Fill:** Flood Fill displays, copies or erases the pixels that are the same color as a selected color. If you select the pixels you want to be erased, those pixels are replaced with the color of the pixels on the top layer. For example, if you select a brown color, the pixels on the top layer that have the same brown color are erased. * **Colorize:** This feature lets you correct an image color by inserting color in the part of an image that needs to be corrected. * **Local Adjustments:** The Local Adjustments tools are useful for making quick color corrections on a single part of a photo. They use a smart RGB eyedropper tool to select the color from the image and adjust it. * **Adjustment Layers:** This tool has a limited range of features; however, you can layer a number of adjustments and effects to do the most complicated work. You can apply a combination of rules to the image for different effects. After using these tools, it's a good idea to edit the images by using the Retouching options discussed in the next section.
