B.1.2: Graphic Processor Unit (GPU) and embedded processing on mobile platforms A number of vendors use GPUs as coprocessors to accelerate CAD/CAM on various embedded platforms including laptops, tablets and mobile phones. Such GPUs may be used in some AutoCAD native applications including 3D and Visual LISP but they have not been a principal requirement for AutoCAD in general. The technology is used more extensively in mobile CAD applications which are gaining in popularity. B.1.3: Automatic generation of coordinate system information Some more advanced applications use automatic generation of coordinate system information from AutoCAD drawings, saving the user the task of having to manually edit the coordinates. Such applications generate a number of geometry based coordinate systems, including XYZ, RAS, DTM, 3D UDL and Perspective History AutoCAD 2000 introduced several new features including: DYNASTY, a family of geometric modeling tools, including Geometry View, Routing, Feature Link, Surface, Generalized Triangulation, Dummy Transformation

and Drawing Creation Single Window which allowed users to launch a single application from any place in the system DirectDraw and DirectDraw Direct3D graphics APIs and hardware acceleration for user interface Multibody was added. It allows 3D models to be linked together, to show the entire system based on a 3D model. Multibody is in the 3D Warehouse. Enhanced modeler can edit models with a laser pointer, which reduces the risk of accidentally hitting the drawing area of other modelers in a multi-user model environment ArcGIS integration Cross platform support, including for Windows, macOS, Linux, iOS, and Android Support for new AutoLISP syntax and API calls AutoCAD 1999 introduced the following new features: Generalized Triangulation is a model composed of a set of triangles and arcs that can then be subdivided into smaller triangles and arcs The drawing editor has significantly improved interaction. User commands can be used to generate options for a command Cross Platform Development Package (XPDP) tools and libraries allow applications to be developed for Windows, Macintosh, and UNIX platforms AutoCAD 98 introduced the following new features: Graphical command line (GCLI) Vectorization, which automatically generated specifications for creating lines, arcs, and polylines A DIB (Device Independent Bitmap) version of AutoCAD AutoCAD 95 ca3bfb1094
