AutoCAD Crack Incl Product Key For PC [April-2022]

AutoCAD 2019 is the latest version of Autodesk AutoCAD. This release came after the release of AutoCAD LT. The current release of Autodesk's AutoCAD product includes the following features: AutoCAD includes an integrated CAD application development environment, which can be used for creating custom user interfaces and applications. The AutoLISP scripting language is available for creating custom user interfaces. The API-based command-line interface and Mac OS Terminal is also available for automating the use of AutoCAD. The AutoLISP scripting language is widely used for developing applications, user interfaces, and tools. AutoLISP is included in AutoCAD, and supports the creation of documents and drawing templates, as well as for customization of AutoCAD's GUI. API API stands for Application Programming Interface. It is a defined set of rules and functions that is exposed to other programs, allowing other programs to directly call upon the functions and data structures that make up the API. AutoCAD's API consists of nine object types (i.e. nine types of objects that AutoCAD can create). The API types are named using the following template: "ObjectType.ClassName". These nine object types can be broken down into three categories: Base objects: These are objects that are used in every design. All base objects inherit from the base Object class. Planar objects: These objects store all objects that are on the drawing plane. All planar objects inherit from the PlanarObject class. User objects: These objects store data that is specific to each user (i.e. data that is not shared across all users). All user objects inherit from the UserObject class. The following list describes the nine object types. A description of the attributes and methods of the following classes can be found in the Autodesk documentation. AutoCAD also supports two methods for calling AutoCAD functions and accessing AutoCAD objects. The first method is the COM Automation object, which is documented in the Autodesk documentation. The second method is the C++ Automation object, which is documented in the Autodesk documentation. COM Automation COM Automation is based on the Microsoft.NET Framework. COM Automation allows you to access AutoCAD objects from a third-party.NET application. It is used to automate the creation of ca3bfb1094
