Open Autocad and click the button on the top right corner with "Autocad" written on it. Now click on the icon which looks like a plus sign and a gear. This will bring you to the keygen. It is normal to get an error about UAC blocking it, that's what you get if you don't have admin rights. Enter the keygen and wait a while. A window will open where you can choose a license for the software. Choose the version that is desired for your license and click save. In the next window where you can see your license key, copy the whole thing and paste it in the settings in Autocad and save it. You are done. Go back to the keygen and enter the license key. It is as simple as that. This is the best way to activate or add more credits to your current license key and use it for multiple computers and/or licences. How to find out the license number? A: You may not be able to see the license number under the Version tab of the Properties dialog of ACADML. If you're using ACADML Pro, you can use the command vcmd/View->Acadml_Version to view it, and the command vcmd/View->Acadml_LICENSE_PLUS to view it. In acad.net, you may have to open the user properties. An easier way to see the license is to open the properties dialog of ACADML and go to the "Version" tab, and the "License plus" is right there.
