All versions of AutoCAD are sold as a complete, boxed software package with the user manual and includes the runtime software, memory upgrades, and external data storage. The first release of AutoCAD was the 32-bit, DOS version of AutoCAD LT (originally named AutoCAD Level 2) for DOS, released in 1982. It was a graphical modeling program that used coordinate geometry (angles and arcs, splines, and offset curves) to create 2D drawings, mechanical diagrams, and architectural drawings. It was the first complete CAD program to do so and was often compared to such programs as Vectorworks, MicroStation, VectorWorks, and CA Teksoft (CA's Design Division became

AutoCAD's primary competitor). It was also the first CAD program to use the native DOS graphics library rather than using a third party library. AutoCAD LT was renamed to AutoCAD in 1987. AutoCAD in its first release as a desktop application used a two-dimensional, window-based graphical user interface with elements based on an analogy with a drafting board. AutoCAD was later re-engineered with a 3D, real-time graphical user interface that used point, line and surface geometry to create 2D drawings and design drawings. It also introduced 2D parametric editing, 2D drafting, 2D and 3D printing, 2D and 3D animations, and 2D image editing and management. I have created a simple menu, and am trying to write a function to allow the user to input whatever they want into the current variable $var. I tried using $var = str_replace(' ', '', $userInput); but the problem is that when I go to use $var to echo it out, it outputs blank. I know I can create a file with the same name as $var and just echo it out there, but I'd rather not have to do that as I'm trying to create a menu with a few different types of info. I have also tried changing it to $var = str_replace(' ', '', $userInput); $var = $var; But that doesn't work. Any help is appreciated. A: Use a different

variable name: $var = str_replace(' ', '',
$userInput); $changedVar = $var; ca3bfb1094

Transcript for GOP candidate in New York's special election attempts to cut ties with Trump Over to Paula Zahn, who's covering the New York special election. Paula, the Republican who's running for an open congressional seat in New York is

trying to distance himself from president trump. How much does this election matter? Reporter: Good morning, George. It's so tight right now, George. The national political environment is so divided. And this is a special election in New York's 13th district, which president trump carried with nearly 70% of the vote in 2016. And it could foretell the health of his presidency. Democrat Anthony congress barry cruz must convince 10% of the republicans here to vote for him. And he says this might be his only shot. If I get 10% of the republicans, I'm right to the oval office. Reporter: After losing in 2016, this republican is back with the same message. Making it clear he's not part of the president's agenda. Cruz's attacks center around the kind of tax cuts, and health care that are going to benefit the rich, at the expense of the working class. Reporter: Cruz says he's an independent republican, and he says this race could be a test for president trump. The president saying he'll stop short of endorsing any candidate. In fact, he says Cruz is part of the Washington swamp he says he's trying to drain

Draw arcs with just a few keystrokes and to specify a tangent and an offset. Use the quick command palette to add arcs, lines, and text to a drawing. When you make changes to your object, automatically update the workspace. When your drawing has multiple layers, enable and toggle individual layers without interrupting your workflow. Make a cut on a line, and the line remains in your drawing while the intersection point disappears. CAD Edge: You can now open AutoCAD Edge files directly from the Windows Taskbar. Added the Repress command, which re-renders a 2D object (such as a line, arc, circle, or text) as a 3D object. Added the Calculate option to the 2D/3D Geometry Wizard. The Objects toolbar on the Ribbon has been updated to show shapes and dimensions only if

Here is a quick rundown of what you can expect from the minimum specs needed to play your games. Graphic Card: A graphics card with 128MB of video memory or higher will be needed to play the games. Please keep in mind that the texture settings in the games are higher than what most computers are capable of running at, so with that in mind the 128MB requirement is higher than it has to be. Safari: Chrome needs to be the default browser for use with any Mac games. All Mac games have a
