Basically this line of code tells your button that the event if (e.CommandName == "ExportDocument") is going to be fired whenever the user click's the button. e.CommandName is the name of the command that fired this event. So to fix this problem all you have to do is to check if the e.CommandName is equal to "ExportDocument" and if its it does what you want else don't do any thing to the e object. if (e.CommandName == "ExportDocument") { // this is the same as saying if (e.CommandName == "ExportDocument") { //do what you want with the e object e.Show(); } } Batch Batch (pronunciation: /ˈbæθ/) plural BATCH, BATCHES, of batch a group of similar items made or assembled at a single time; a number of items that are the same in nature: a batch of cookies; school lunch required for the next term. any substance or mixture collected, either physically or in substance, as salt, sugar, coffee, chocolate, tea, etc., and put together to be sold. a substance or mixture prepared from a source that is used in making other materials; a material for producing goods or services; raw materials. c. an amount or amount of material that is or can be handled with one batch: a large batch of cookies; the day's rice batch. a quantity made at one time or in one proceeding: a batch of tacks. a group of workmen or similar persons: a batch of workmen in a factory. a set of transactions in business, as a set of orders, invoices, etc.: a batch of business transactions during an office day. c. a batch of milk. the 12 boiling temperatures at which the water in a steam boiler begins to boil: #4000 [BoilerTemperature] BATCH. a group of appliances and components of the same type; particularly, a group of computers having similar applications, 0cc13bf012

Inversat, Genet,.[Prognostic value of myocardial magnetic resonance imaging in chronic Chagas disease]. The prognostic value of myocardial magnetic resonance imaging (MRI) in patients with Chagas disease is unknown. To evaluate the prognostic value of myocardial MRI in patients with chronic Chagas disease. Patients with Chagas disease who underwent an MRI in the course of an elective diagnostic work-up were followed up with respect to the occurrence of death or cardiac transplantation as a result of the underlying disease and for a mean time of 17+/-13 months. The endpoint of the study was death or cardiac transplantation. Myocardial MRI findings were analysed and quantified in a semi-autom
