I would like to place my images one under another and at the end of each image I would like to have an vertical line. Since I have 3 images, 2 of them should be under one image. How would I create this kind of layout? A: If you want to do this in the xml, I'd create a vertical LinearLayout containing three horizontal LinearLayout each of width WRAP_CONTENT set orientation to vertical and then set the height of the middle LinearLayout as WRAP_CONTENT - the height of the outer two LinearLayout's. Then I'd set one of the inner LinearLayout's to have equal height as one of the outer two LinearLayout's. You could use a relative layout and place the outer two LinearLayout's inside it and adjust the margins and weights of the inner LinearLayout that you use as the child.

In a typical programming exercise that I have seen many times, the following operation is performed: // C# var dict = new Dictionary(); //... set values of dict var count = dict.Select(kv => kv.Value).Count(); // count is 3 I am not sure what would be the "name" for the operation in programming language theory. I have read the definition of a function call in terms of semantic action but could not find one that applies here. However, I am still interested in knowing if there is a name for this operation and what would it be in programming theory. I am looking for a name in programming theory other than "Select" Update I should have explained more carefully. // C# (or other language) //... set values of dict var count = dict.Select(kv => kv.Value).Count(); // count is 3 I am not concerned about the return values here. So this is quite different from this usage of Select that is common in functional programming. Here, the expression is used to make a copy of all the values into a new collection (i.e. the items in the dict are copied). A: It looks like you are searching for "count dictionary values", which can be also done like: Dictionary dic = new Dictionary(); //... set values of dic var count = dic.Values.Count(); A: From a strictly academic perspective, I would call it a Zip operation. A zip operation is when

S.We are the world leader in Offshore Wind Turbines, with about 500 MW in project development and construction, with a further 1 GW to be deployed in the next five years. We cover all aspects of wind and marine energy, from design to manufacture, operation to maintenance, we have first class facilities to host your wind project and provide an enduring supply of power. High spec turbines, low cost: Wind Energy with EDF Renewables Today over 400 companies are active in renewable energy worldwide, investing a total of over 20 billion euros a year. 800 of them are based in France, yet France today is one of the world leaders in renewable energies, with more than 12 GW installed. Our range of off-shore turbines vary in size from 0.25 MW to 500 MW. There is a turbine for you. These are the wind turbines of the future: Marine Energy Our focus is mainly on Marine energy, but we also design and build onshore wind turbines. We provide solutions that are tailor-made to your needs, in terms of size, duration and wave conditions. We cover all aspects of wind and marine energy, from design to manufacture, operation to maintenance. There is a turbine for you. Major projects We are the global leader in offshore wind: EDF Renewables is present in all the major wind markets worldwide, with thousands of MW under construction. Approvals The EDF Renewables Group has achieved a top position in every part of the Wind sector, in 5 countries and 9 industry sectors. In 2014, the Group is the global leader in the offshore wind market. Commitments We are committed to constantly improve our technology and the services we offer to our customers, by implementing the best operational practices and new technologies. Standards We are working with the world's leading authority on energy standards, the EU, to create new reference situations to deploy offshore wind turbines. Media Partners We are also active in the media, we sponsor special programs on the benefits of wind energy. With 3,000 MW in site (1,150 MW in the offshore sector), EDF Renewables makes the energy transition possible. Today, in all the major markets, EDF Renewables is a world leader in offshore wind and a global reference for wind capacity. Offshore Wind Turbines
