“I Will Sing Your Praises To The Sky” – Hosea 13:4 The author-artist, Clarence Lawson has painted a render of this scripture into a stunning portrait that captures the heart and soul of the Word of God in an inspiring pictorial work. I am always inspired by anointed art work that is also relevant in today’s world. This is a favorite image for us as we lead a daily prayer of Hallelujah praising God for His goodness and mercy towards us. Striking scene of breaking dawn above the silent giant of the city of Dresden on the first day of a day of awakening. The old city center and less “touristy” parts of the city often seem out of reach, with their comfort shelters and stifling coldness, yet the central area is rousing with new renovations and lively exteriors, as it is also the center of cultural life in Dresden and is one of Germany’s oldest cities. While Dresden has a lot more to offer than the bustling center, it is the former imperial capital, and one of the city’s main landmarks, St. Annen (St. Anne), the new church built on the foundations of the original church, is a must-see attraction, where the Dresden Frauenkirche is located. This site features traveling people of all nationalities We support the work of artists and bloggers alike Culturally enriching and educational Provides a forum for artists and bloggers to interact and spread their work Connecting to the world and the human spirit No longer being run by the National Geographic Society Why travel? Overseas, your adventure can mean spending less, having a better time and making new friends in unfamiliar places. Your benefits can involve gaining new perspective on the world as well as experiencing a different lifestyle. It’s a great way to see more of the world. Your journey can also inspire and broaden your perspective on how the world has changed. Through meeting new people, experiencing new cultures and learning new ways of life, you can meet new challenges and improve your own. Overseas, you can also make new friends and find a new job. Many of today’s businesses are seeking professionals with international experience. Many of today’s lifestyles and entertainment and stimulating places can be found overseas. Travel has changed the way

. Management, NSW energy is critical to the state's economic. can show that Australia geotechnically as significant in the rate of tectonic. GeoTide analyzer converts observed tide gauge data into the tidal harmonic constants which can then be used to make tidal predictions for. I am a casual observer of coding culture, and I've found that people usually keep to one style for their code, and sometimes try to make it "perfect", but in the end I think the final product isn't much different than it would have been if they had tried to be consistent, and just pushed the envelope. So, I try to be consistent, but not perfect. I do my work quickly, so it's usually faster to just use the super-solid and familiar "formal" style for "real" work. But when I'm just hacking on something to just "get it done", I mix it up. Related: 4 Ways to Code Better and Faster 1. Pick A Coding Style, But... ..don't be mindless about it. I think that most of us do have a style that we prefer, but picking a single method for the entire team just won't work. There are pros and cons to each style, but my point is that the first time we check a codebase into our DVCS, we'll almost always be in conflict with the team that wrote it the first time. So, if you do have a set "official" coding style, you should consider that people may be putting in changes that are "in conflict" with your "official" coding style. You may have to ask people to please play nice, or put some rules in place where "sloppy" style isn't permitted. Related: How I Code: 2. Use Your Conscience Some people write code in a formal, consistent way, even though they like to think they do it in a "non-perfect" way. The point is, that some people think a formal "perfect" style is better, and some people think a more loose, "amateur" style is better. Personally, I'm completely neutral in this area. I like to write code in whatever style I want to write it in, and be able to fix
