In light of the various life-styles within which individuals and families live, the authors have questioned whether the technology of group dynamics will prove a sufficient base on which to build an understanding of how to conduct group therapy effectively with individuals and families. In other words, are they necessary? Data have been gathered from the literature on successful and unsuccessful group therapy groups with individuals and families. According to the data, the authors suggest that communication skills in the therapist, the inclusion of similar individuals in the group, the length of time for the groups, and other content issues are necessary elements for these treatments to succeed. This communication

---

skills concept is asserted to be one of the primary factors to be applied to the family therapy programs as well.
