Hydrolyzed oral opioids are used for opioid treatment of chronic noncancer pain in patients for whom other therapeutic options are not available. The objective of this analysis was to assess the bioequivalence of two hydrolyzed-opioid formulations of oxycodone/naloxone (H-Opana/Noxitane, Mundipharma, St. Louis, MO) and hydrocodone bitartrate/naloxone bitartrate (H-Vicodin-HD, Alkem Laboratories, Deerfield, IL) using an internal drug-dosing model. Pharmacokinetic data from the hydrolyzed opioids on days 1 and 21 were analyzed using a population pharmacokinetic model. For the H-Opana/Noxitane formulation, the 90% confidence interval of the observed

geometric mean ratio of the systemic exposure (AUC) and maximum concentration (C(max)) of oxycodone after hydrolysis was within the bioequivalence range of 80% to 125% for day 21. For the H-Vicodin-HD, the 90% confidence interval for the AUC and C(max) ratio was within bioequivalence limits (80% to 125%) on day 1, but not on day 21. The differences between the 90% confidence intervals (day 1 vs. day 21) were less than 10% for both formulations. These results demonstrate that the bioavailability of oxycodone is comparable for H-Opana/Noxitan on day 21. Furthermore, the bioavailability of hydrocodone is comparable on day 1 (80% to 125%) for H-Vicodin-HD. The internal drug-dosing model can effectively evaluate the bioequivalence of controlled-release oxycodone/naloxone and hydrocodone bitartrate/naloxone bitartrate formulations. 'Stress' among parents of children with an out-of-town hospital stay. The experience of parents of children in an out-of-town hospital is compared with that of parents of children who are in the usual school system. Parents report significantly more stress, disturbance and anxiety during

How to Bake Fresh Fruit! I often buy whole fruits and let them sit in my refrigerator, until I want to make something, then I am alllllll about making something! This time though, I had my little sweet pea help me show you how to bake fresh fruit, before it goes bad. He loves helping me make desserts and is really excited to help with this. While most baked goods are pretty easy to make, I find baking fruit more challenging. It doesn't matter how pretty the cut fruit is, the juice can all run together and cause sticky spots. I make sure to chop the peels of the fruit up before putting in the oven so they can move more freely, and the fruit stays juicy. I highly recommend baking fruit in the oven instead of on the stove, as the high oven temperature helps to melt the juices a bit and keep them from getting all over the stove. Having a little pea help me really put this recipe into action. It sure makes for a delicious treat! Whole Fruit Baked Apple Recipes Directions Preheat your oven to 375 degrees Fahrenheit. Slice one apple into 8 wedge-sized pieces. Peel and cut two orange slices into 4 finger-sized pieces. On a cookie sheet, arrange the apple slices, arranged in a cross-hatch pattern. Nestle the orange pieces around the apples. In a small bowl, mix together the brown sugar, cinnamon, ginger, and salt. Sprinkle over the fruit. Bake the apples for 20 to 30 minutes. Once they are golden brown and hot, you can serve them warm or let them cool completely. Mmmmm, fresh fruits with a sprinkle of cinnamon and ginger is

a recipe with any crowd! If you want to try out different whole fruit baked treats for any other holiday, like Christmas, Valentine's Day, or Easter, check out the recipes for:
