What's New In Syn-Thesis?

The Syn-Thesis add-on allows creating various waveforms from a single synthesizer: The waveform can be created with 4 harmonics per oscillator, resulting in a 16 harmonics add-on. Each harmonic is composed of a resonance, a sawtooth phase and a ramp to control the frequency. Also the envelope can be adjusted with 5 parameters. The resonance range is from 3-64, the ratio is 1-64 and the depth is from 0-1. The phase is linear or sine. The envelope can be 4 types: LFO, step, triangle, ramp. An extra LFO can be added. Additional Envelopes The Syn-Thesis add-on features an extra LFO. By calling the LFO function a new LFO with custom parameters can be created. The envelope can be a step, triangle, or ramp. Keyboard Map The Syn-Thesis add-on features a keyboard map for the Novation Keyshot. It can be used to assign the function to the keys by simply pressing them. The map contains all 4 oscillators, the LFO and the envelope. Please note that the map is predefined.
