
Crystal Chameleon

The year is 2131. Telepathy is common place. Telepathic dolphins are the most powerful AI in the world. They've been keeping us safe for decades but now they want to take control of everything. Meet Jackie, a freelance negotiator who doesn't have any patience for the dolphins control. Together you'll make a journey through cyber punk future. Will you join the dolphins or stay loyal to mankind? For any questions, please contact the developer (more info at [Crystal Chameleon](#) is a choice-based visual novel that follows a female protagonist named Jackie on her journey to uncover the truth about her father. If you choose the good ending then you will meet new people, acquire new skills and enhance your experience. If you choose the bad ending then you will destroy a lot of your time and your memory will become corrupted. Whichever path you choose you'll make decisions that will have effects on this journey. The story of Crystal Chameleon is very diverse, depending on the path you choose the ending will differ. In the good ending you will be able to make decisions that will only affect you. In the bad ending there will be decisions that will be applicable to both the main protagonist and the secondary characters. MMORPG game Crystal Chameleon. The world of Crystal Chameleon is inhabited by various races, each with their own appearance, culture and quirks. In this free flash game you will see how these groups interact with one another. Crystal Chameleon Features Key:

- 12 exciting levels
- 3 powerful Power ups
- 6 game modes
- Important bonus

A: Try moving your game.html code above your index.html. That should fix it. Also, I suggest having what files you need in the directory above your html/php files so that they are already loaded when they are called for. Your code looks pretty robust, but I keep everything at the top of my site's html/php files and have it flow like this: Put your game.html in there with your html/php and just be sure to make your site base always the same: To your wildcard 301 redirect. It doesn't look very wildcarded and would look better if your website were instead of I would suggest creating some kind of subdomain that you use for your website that would match a pretty random game name like newgamer123.example.com and create a redirect like this:
