In this book, I introduce you to the various types of layers in Photoshop and teach you how to create, work with, and remove them. You also find out about altering and enhancing the color, exposure, and other image qualities. In Chapter 2, I guide you through the steps to open up and work with a digital photo in Photoshop, including how to make adjustments and work with layers and channels. You also find out about opening and preparing a blank canvas to work with, as well as how to work with and add shapes to your canvas. I also show you how to remove unwanted areas from your image and how to work with the various blending modes to change the color and other visual characteristics. I also show you how to layer two or more images together to create interesting effects. In Chapter 3, I dig deeper into layers, and I introduce you to layer groups, a unique feature of Photoshop that enables you to group related layers into a single layer (such as all the colors in the layer or all the layers on a photo). I explain how to create and work with individual layers in a layer group. In Chapter 4, you find out about masks, which enable you to work with parts of a photo that you want to change, as well as how to create your own custom masks. You also find out about using masks to overlay shapes on the photo and how to work with layers as a background. You discover how to use the adjustment layers feature in Chapter 5 to apply and adjust the color, exposure, and other characteristics of your photo. Finally, I show you how to work with shapes and how to change the appearance of images in the Styles palette. ## Conventions Used in This Book Throughout this book, you find italic text and bold text, which indicate new terms and areas of concern. * Italic text is used to emphasize new words or terms. * Bold text is used to emphasize the titles of sections and chapters and is not bold within a single paragraph. ## What You

Changes in net metabolism during development of obesity and insulin resistance in rats. The objective was to assess the changes in resting metabolic rate (RMR) and respiratory quotient (RQ) and their alterations in relation to changes in body weight (BW), body fat (BF), and circulating insulin (Ins) during development of obesity and insulin resistance in rats. Wistar rats received an atherogenic diet during 8 to 13 weeks of life. At the end of the diet, BW, BF, and fasting blood glucose increased in all animals compared to control group (C), which was trained on a standard diet. Rats of the experimental groups (E1, E2, E3) were treated with a hypercholesterolemic diet and grew as obese as animals of the C group. Insulin treatment was performed in order to reduce the insulin resistance in the groups E2 and E3,

during 6 to 10 days. At the end of the experiment, the animals were killed and the following parameters were measured: BW, BF, serum triglycerides (TG), Ins, and glucose. The data showed that insulin treatment is associated to a significant decrease in the BW in both treated groups, without changes in BF. RMR was increased in obese animals, and RQ was decreased in comparison to the C group. The RMR and RQ values were higher in obese rats (E1, E2, E3) than in C animals. Ins treatment significantly reduced the RMR in both groups E2 and E3, but its effects were only noticeable in E3. The correlation between RMR and Ins was positive and significant (r = 0.69, P Q: Using getDay() function with Kendo UI date picker I'm using kendo ui grid with a datepicker.
