A: I have a theory, based on sheer volume of machines, that something is going on. The IP address you're using for the download is blocked in nearly all of our tests - but the bulk of downloads are being made from ips in Germany. That's the theory for now - anything more definite will be in the answers from functools import partial from operator import sub from... import ast from... import exceptions from... import operators from... import util def \_get\_identifier(node): """Get identifier from a pyast node """ name = util.get\_identifier(node) return ast.Identifier(name) def \_get\_body(node): """Get body from a pyast node """ body = util.get\_body(node) return body def \_get\_starargs(starargs): """Get starargs from pyast node """ starargs = util.get\_starargs(node) return starargs def \_get\_xargs(xargs): """Get xargs from pyast node """ xargs = util.get\_xargs(node) return xargs def \_get\_body\_str(node): """Get string form of body of a pyast node """ body = \_get\_body(node) return str(body) def \_reconstruct\_body(node): """Reconstruct

---

```
node body according to pyast node ast node """ if isinstance(node, ast.Body): # We reconstruct
the body of a pyast node based on the # attributes of its ast node. Specifically, we check for # a
starargs attribute, and if it is present, we parse # it as a list of *args, then we check for the
presence # of xargs.
```
