It was quickly revealed that the game would be a reboot of the original Battlefront series, created by DICE, which had been a PlayStation 2 exclusive. The game was released on October 17, 2015. As the sequel to 2016's Star Wars Battlefront, the game features a new single-player campaign, a new map, many characters, and a greater focus on the Galactic civil war. : How India's Growth Model Threatens Its Future Indian diamond traders watch an employee of Illinois Diamonds rub the flesh off an oragnarium stone as it is being weighed, in New Delhi October 18, 2004. Prakash SINGH/Files The past 50 years in India have transformed the country from a poor agrarian economy into a modern industrial powerhouse. But the spoils of growth have not been equally distributed. The economy has grown rapidly, giving rise to new middle classes in new industries. While a new moneyed class is breaking through traditional social barriers, the growth model that has become the nation's dominant economic strategy faces a new challenge: rising inequality. This state-by-state assessment of income inequality in India was a review of recent work by a team of economists at the Census Bureau and other think tanks. The report is composed of data from the first-ever national household survey on income and expenditure in India, conducted in April 2009. The results were so startling that the survey team was clear in its warnings about the need for caution when trying to extrapolate from this data. "One of the most distinctive aspects of the [current Indian economic] transition from a predominantly agricultural-based economy to an agro-based one was the onset of rapid industrialization which initially had a low and then a high profile," the team says, citing as an example the effect the steep economic growth of the 1980s had on rising household income. That growth was real enough. India's economy grew an average of 14.3 percent annually between 1951 and 2009, with the highest percentage gains for sectors such as manufacturing, electricity and construction, including roads, according to data from India's planning ministry. Per capita income among the lowest groups grew by a similar average of 14.3 percent. For categories ranked above him, average annual growth was much lower, at 2.8 percent. Still, the picture is deceptive, for it leaves out the top 1 percent of Indian households -- a group that averaged a 29.6 percent annual growth rate during this period. Today, according to the 2009 national survey, average income among the lowest income group has more than doubled since the early 1980s, while those in the upper two deciles have experienced a fivefold increase. For the top 1 percent of households, annual income has, however, seen little change over the same period. "Unfortunately, this is not included in the national statistics," the Census team said, adding that
