Formatting your images As you examine the different types of formats that are used with an image-editing program, keep in mind that a file or image in one format does not necessarily mean that it can be displayed in the same program or on the same media. Even though a file may be in the same format as a file you edited in another program, the viewer software or media for that program may have standards for the type of files that it can handle. Adobe's own Photoshop files are stored in the JPEG format. The JPEG format is used by most non-Photoshop software programs, including images you import into an Adobe product, which use the default JPEG format unless you specify one. The Web and mobile devices and some presentation graphics programs, including PowerPoint, expect the JPEG format to be used as well. When working with other programs, you usually need to use the Adobe Photo Album software to store your images. See the section "Saving your images" later in the chapter to find out more about Photo Album.
