Circumcision is the surgical removal of foreskin from the penis. Why is it done? The foreskin protects the penis and is a common natural barrier to infection. It is removed to allow for easier cleaning of the shaft of the penis, reduce future skin infections, and can reduce future problems with urination. When is it done? Circumcision is usually performed in infancy to 6 months of age. If the circumcision is done at the same time as the first sexual experience, it is most likely to be a bonding experience between mother and infant. This is less likely to be true in later years. Precaution Gardening - Avoid prolonged contact with soil, grass, and other plant materials. Dental care - Avoid inhaling or absorbing the suction pressure of dental instruments. Hemorrhoids -Have hemorrhoids checked before an operation. How is it done? The procedure is usually done in a hospital or surgical center. An anesthesiologist will give the newborn a sedative to help them sleep through the procedure. The infant's penis is cleaned with antiseptic solutions. A circumcising instrument,
