I'm trying to use linear interpolation and Bezier curves to create this animation here: .circle::-moz-animation { -webkit-animation: circle 2s infinite; -webkit-transform-origin: center center; -webkit-transform: scale(1,1); } @-webkit-keyframes circle { 0% { -webkit-transform: scale(1); } 100% { -webkit-transform: scale(1.3); } } .circle { width: 100px; height: 100px; margin: 10px; border-radius: 50%; background-color: red; -webkit-animation: circle 2s infinite; } This is what I have so far, but I need a working example of this so I can reproduce the effect without using trig functions or doing something like math.random() * (1.3-0
