History of Photoshop Adobe Photoshop was released in 1987. It was designed by Thomas M. Feher, Alex Raymond, and John Nicks. It is now owned by Adobe Systems, Inc. and is the program of record for creating and editing raster images (bitmapped images). The name Photoshop was inspired by the Mac OS's own built-in program, PhotoShop, also owned by Apple. It was released in 1987. PhotoShop had a lot of features in its time,

but the developers thought that they could take some of the basic principles, make it more accessible and user friendly, and present them as a standalone product that they hoped would go on to build a very successful company. In 1995 the Internet was becoming increasingly popular. These two factors, combined with a growing desire to upgrade and standardize applications, made the Mac OS market ripe for a new software opportunity. The creators of Photoshop desired to make a similar change with the creation and editing software. They began to imagine a program that could do the same sort of things as PhotoShop, but as a digital image editing program that could be available to all Mac owners, not just Mac owners who could afford the price of PhotoShop. Eventually, this could become a worldwide standard for image editing, as the Internet was expanding into more and more households. The first version of Photoshop was just a few basic functions—a basic file recovery program, a basic resizing program, and a basic image mapping program. While these basic programs were viable, the user experience was limited. The founders of Photoshop learned that the users they wanted to reach—the public, not the power elite—had no real idea of how to use a computer. They soon realized that if they were going to get their idea of a universal standard into the hands of everyone, they would have to learn how to use Mac computers and they began to teach themselves. Around the year 2000, the company realized that they needed to make Photoshop for the Mac a great deal more user-friendly to the public. For this, they hired Scott Belsky as the project's lead designer. Belsky set about completely re-imagining and re-vamping the entire program. He made new versions of each of the major parts of Photoshop—the file recovery program, the resizing program, the image mapping program, the pencil tool, the eraser tool, the paintbrush tool, the brush tool,

Q: Subspace Vectors Proof Let V be the vector space of all $f : \mathbb{Z} \to \mathbb{R}$ such that $f(n)=f(n+1)$ for all $n \in \mathbb{Z}$. Show that $\mathrm{Span} \{1,5,7,11\} \subset V$. It is because the space does not have a finite basis, I am trying to show that this basis is a spanning set but not linearly independent. A: $1,5,7,11$ are linearly independent but not a basis. Let $f_1(x) = 1, f_2(x) = 5, f_3(x)=7, f_4(x) = 11$. Then each f_i can be written as the sum of these four linear combinations, so $f(x)=f_i(x)$ is in the linear span of this set. Photographer's Note Sometimes I wish I was a writer, the usual cure-all for being hopeless at any of the sciences. A lovely home, fine gardens and a spectacular view in the Hills The sun was just breaking through the fog, painting the hills with pinks and oranges. My home village sits at the foot of the Orinoco River, a lazy valley of rolling hills and eucalyptus trees. The town is small, but I haven't met anyone who lives here longer than a week or two. My home is not as old as others in the area, but it was home to a riverboat captain who fell in love with the beauty of the river, the lush green hills, the bushy forest and the sea. Shortly after I was born, he took a job on a riverboat and moved the family to the town. I have lived there for my whole life, and the riverboat has had many different owners. She has been a yacht, a tugboat, a barge and a dive boat. She has seen and done all manner of things, and has many stories to tell. A tired riverboat in the middle of an ill-fated crossing I spent my childhood spending every day on that boat, learning about rivers and the sea, and how they affect land. One
