\* Block Windows default applications from automatically opening web pages with Edge \* Open Browser Settings window \* Set Edge as your default browser Disclaimer: DoubleR Software programs are freeware, shareware, or share buttons that are ad-supported and often create shortcuts to social media websites, so be sure to check the program source code and privacy policy before downloading and using it. Of all the years of downloading, installing and testing software, it can be a pretty daunting process to decide which of the software to trust the most. There is plenty of software out there, and with the unknown there comes the possibility for malicious software to get into your computer system and alter your system's settings. Other than prying on what the software does, there is no easy way of knowing if it is safe or not. One of the programs that is out there are legitimate programs as opposed to malware. One of the main difficulties in distinguishing the two is that the terms are pretty much identical. They both hide themselves to cause damage and usually make themselves look like a standard program such as a dictionary, calculator or even a notepad. The one thing that will set the legitimate programs apart from the malicious ones are the appearances of the programs. A program that can be used to remove software, uninstalling programs and uninstall the typical malware. It also has the capability to uninstall an application within an hour of its installation. The process of uninstalling an application is no different than a user removing a shortcut from the desktop, but the speed in which the program does it is incredible. FakeOutlook Uninstaller is one of the most famous programs for cleaning up your PC, it is a program that scans all files on the computer and erase malicious files. It is the best software to uninstall most programs. It is safe, easy to use and free. Dissapointing for the Win7 users, because not for Win8 and it doesn't have the capability to uninstall programs. But for Win8 users who don't want to download Win7 (or who has Win7 already), it is an additional bonus. Given all the documents, pictures, videos, applications and setting you need, what is there to worry about? Everything can be done from within the Gallery, and it can be done on your PC with just a few clicks. With Photofiltre, you may now not worry about losing anything important with a backup being the only thing you need

- Redirects Edge's URI protocol to your browser: - Uses the value of the file extension to open the URIs - Uses the path values if there are no extensions - Includes a default value for autorun

EdgeDeflectorSlim is a lightweight utility designed to prevent Windows from opening web pages with Edge instead of your default browser. According to the developer, the tool is based on EdgeDeflector. However, take note that the none of the code is based on the original program and it was all written from scratch in C. Simply launch and make the modifications are instructed For starters, the tool opens up the exact Settings where you can prevent your computer from allowing apps to use Edge to access the Internet. To be more precise, the app pops up the Default apps setting window to make it easier for the users to set it as their default app for the protocol. It is worth mentioning that neither updates to Microsoft Edge or quality updates for Windows will reset the aforementioned configuration. Nevertheless, you should bear in mind that major updates and OS upgrades may change the settings, but luckily neither occur very often. A tool that simplifies how you redirect calls from the Edge URI protocol Despite the numerous attempts of forcing Edge on users and the improvements, the vast majority of users still do not want to touch it. In fact, if uninstalling were possible, then there is a good chance that many would have removed it a long time ago. Therefore, the best thing users can do in this situation is to prevent it from automatically opening web pages or running in the background and eating up computer resources. All in all, EdgeDeflectorSlim could give you a hand with blocking the Edge URI protocol so that you can avoid the nuisance.)
