for 2D drawing, while the first computer-aided drafting (CAD) programs used vector graphics. Drawing objects were created by drawing a series of lines (a vector), or by defining a series of points (a raster). Released in 1985, the original version of AutoCAD was a 16 color graphics program. In 1986, AutoCAD was re-released as a 32 color graphics program for the Apple Macintosh. In 1987, the 2D-plus program was introduced on the Apple Macintosh as an update to the 16 color version of AutoCAD. The first Microsoft Windows version, AutoCAD 10, was released in 1992. At the time of its introduction, Microsoft Windows was rapidly gaining acceptance as a desktop computer operating system. The first version of AutoCAD for the Windows was a 32 color graphics program. AutoCAD's DXF format is for exchanging drawing information from and to third-party applications like CAD tools. AutoCAD includes extensive XML and command file capability. In XML, a command file is a "file" with the extension.cmd. A drawing created by using AutoCAD has been termed an instance. A reference or link to an instance in a drawing is termed an instance reference. This means that a drawing can contain references to other instances. A drawing may contain many instances. Each instance has its own space. Drawing sections are drawn using the Instancing feature. A drawing may contain different types of entities, which can include text, blocks, groups, layers and other types of entities. Customizing features AutoCAD allows users to customize the user interface to suit their own personal preferences. Customization of user interface objects is done by altering the appearance, behavior,

or by changing the size of the object. Appearance customization is done through the use of skins. The user can change the skin style in which the drawing canvas appears. There are five skin styles which are; Standard, Vintage, Drafting, Text, and User. Usage of the skins are as follows; Standard skins display the blocks on the drawing canvas, Drafting skins displays the blocks to form a usable drawing. The drawing canvas appears textured or scratched. The blocks or components of the drawing are not displayed. User skins display the blocks and components of the drawing as textured or scratched, and allows users to adjust the user interface to their liking. The drafting skin is the default when opening a drawing created by an experienced user. The user interface is simple and the objects on the drawing canvas are aligned, creating an easy view to the drawing. The drafting skin is a useful skin to have in creating a new drawing.
