Personal computer software AutoCAD has long been used as a personal computer application. In the 1990s, it was among the first graphical CAD packages to run on the then-popular Windows 95 operating system. In the late 1990s, AutoCAD also supported Windows NT. In the 2000s, it switched to a Microsoft Windows model. In May 1999, AutoCAD introduced the first version of a Windows client that could run on computers with only 16 MB of RAM. In the early 2000s, AutoCAD was one of the first major programs to support the Windows XP operating system and Windows 2000 Professional, Enterprise, and Ultimate. In early 2009, AutoCAD was one of the first major programs to support Windows 7 and Windows 8. AutoCAD for Windows continues to run on later versions of Microsoft Windows. AutoCAD Express AutoCAD Express was a version of AutoCAD with a free version of the Autodesk Exchange Apps available for download. The software was available for download on the company's website, as well as from some resellers and other sites. It is no longer available from Autodesk Exchange Apps, however, as of October 2017, AutoCAD Express was discontinued in 2018, with all functionality being moved to the Web-based Autodesk 360 cloud services and Autodesk Designjet software products. Web-based With AutoCAD 2016, AutoCAD released a Web-based version. It supported Internet Explorer 7 and later, Firefox 3.0 and later, and Google Chrome. The Web-based version is offered as a cloud-based service through Autodesk's cloud services platform, Autodesk 360. The most recent release of the Web-based version is AutoCAD 2017. The Internet connection required to access the web-based version is provided either through Autodesk's cloud services platform, Autodesk 360, or by using a personal cloud solution such as iCloud, Google Drive, or Dropbox. AutoCAD 2018 introduced the HTML5 version of AutoCAD 360, designed to run in Microsoft Edge on Windows 10. Mobile apps AutoCAD offers a set of mobile apps for iOS and Android devices. Or use the online version at The present invention relates generally to the art of producing foamed polyester articles and more specifically to polyester foams exhibiting a combination of desirable physical properties. Foamed articles are well known in the art. One of the desirable physical properties of foamed polyester articles is that the foamed articles exhibit low stiffness in combination with high strength. This combination of properties is desirable for automobile parts, food containers, pipe insulation and other applications. Heretofore, the foaming of polyester articles has been carried out with or without the use of filler. Typically, filler is used to replace some of the voids in the foamed articles. Filler is used to decrease the weight of the foamed articles while maintaining or enhancing the physical properties. If the articles are foamed without the use of filler, the relative lack of "stiffness" of the articles prevents or limits the ability to form the articles into useful shapes and/or forms. Such articles, while they may be useful, may only be useful in applications where high impact and high temperature properties are not required. If filler is used, the article exhibits superior stiffness. However, the high load bearing characteristics of the article are decreased because the relative weight of the article increases. one or more of the rights that are specifically granted under this License.
