An entity can be named, added to the drawing by AutoCAD as a feature, or imported from another file. The process of creating an entity with AutoCAD is referred to as "dwgining." The CAD portion of the app enables construction documents and specification documents to be designed and produced using features of the software such as slicing and three-dimensional (3D) modelling and the production of engineering drawings. The development of AutoCAD began in 1981, with Gary Brisson as the software architect and programmer. The software was first intended as a screen-oriented drawing tool for the IBM PC. Design and development of AutoCAD's user interface began in 1983, with the first user interface tools and features implemented in 1984.
