As of 2018, AutoCAD was the only commercially available CAD software package that runs on macOS, and a number of Linux-based operating systems. However, various CAD software vendors supply proprietary versions of CAD for Microsoft Windows, such as the free version of CorelDRAW, and the free version of SolidWorks. AutoCAD started as a limited release to select users in the defense industry. In addition to providing a graphical user interface, the software application had several advantages over existing desktop CAD programs. CAD applications in the 1980s could be quite complex, requiring specialized knowledge of drawing commands, mathematical equations and mathematical operations on geometric entities, and generally using a command-line interface, with each command executed by typing the command name followed by a series of parameters. AutoCAD was designed to be easy to use, with most drawing commands being executed by clicking on the entity that was to be affected. Also, entities can be moved, rotated, mirrored, deformed, extruded, cut, and combined together in a drawing. The software was originally released to the defense industry, but AutoCAD gained popularity in the commercial market as it became increasingly capable of supporting highly complex designs. AutoCAD was the leading CAD software for the aerospace, automotive, manufacturing and architecture, and civil engineering industries. It is the third most popular CAD software package in the United States after AutoCAD and SolidWorks, and the leading CAD software in Europe. History AutoCAD began as a limited release within the defense industry and was originally developed by two employees of Pratt & Whitney, where the concept was conceived: Paul Overberg and John M. Swanson, known as "AutoCAD Guy." Overberg was one of the first to develop the earliest versions of AutoCAD, with Swanson taking over management of the project following Overberg's 1981 move to Pratt & Whitney. AutoCAD 1.0 was released in December 1982, and introduced the Graphical Editing and Manipulation (GEM) user interface with a new programming model that was more human-centric and easier to learn than most other CAD programs. Later that year, Autodesk bought the company. Autodesk upgraded the GEM programming model to the newer Graphical Query Language (GQL) and released AutoCAD 1.1, with enhanced modeling and animation capabilities. In the early 1980s, Autodesk aimed to compete with CAD vendors who were creating very expensive mainframe-based applications that were

AutoCAD R13 and older Enterprise AutoCAD R13 has a number of new features including Enterprise. As of version 2008, AutoCAD and AutoCAD LT are available as a subscription-based model where unlimited drawing rights are provided for a monthly fee. Features such as cloud-based collaboration and AutoCAD mobile apps are made available to subscribers. Advanced features such as feature-based drawing protection, layer-based protection and other functionality are included. Customization AutoCAD is extensible by the user via scripts, Visual LISP, and the scripting interface. New development tool plugins allow access to visual elements such as the visual styles library, or to the more than one million items in the Visual Database System. Other new development tools enable access to third-party software to enhance functionality. The ability to create new workflows has been made possible by the introduction of the RACENAME system which allows for templates that can be saved and reused by others. The ability to create custom workspaces has been expanded by the introduction of the SEQUENCE system, which enables users to produce pre-defined sequences of commands that can be re-used for multiple drawings. Third-party add-ons include: Microsoft Visual Basic for Applications Microsoft Visual C# for Application Microsoft Visual C++ for Applications Visual LISP Visual Database System AutoCAD Objects for Autodesk Exchange Apps AutoCAD ArchStudio GEO System Atexie Asymptote Recognition In 2008, AutoCAD received the following awards: CADDY of the Year Award from Gartner Research, Inc. Best Web-based Engineering Graphics Tool by Gartner Inc. Best Design Tool for Engineering Graphics by the Canadian Standards Association Best Engineering Graphics Application by Inside Autodesk Best Engineering Graphics App by Engineer Magazine In 2012, the UN's International Fund for Agricultural Development (IFAD) awarded Autodesk a grant of US\$3.5 million for a series of 'women in farming' projects, including a training program aimed at girls and women in farming in Rwanda. The program will provide up to 4,000 women with training to help them establish an income-generating business, and will include activities to increase public awareness of their businesses. Autodesk was also awarded with a 2011 Global Innovation Award by the International Information Technology & Innovation Foundation (ITIF af5dca3d97
