Roblox is an online game platform and game creation system developed by Roblox Corporation that allows users to program games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004 and released in 2006, the platform hosts user-created games of multiple genres coded in the programming language Lua. For most of Roblox's history, it was relatively small, both as a platform and a company. Roblox began to grow rapidly in the second half of the 2010s, and this growth has been accelerated by the COVID-19 pandemic. The site consists of three main parts: the "block playground" where users can create and edit games; a "marketplace" for users to buy in-game items with real-world currency; and an "instant play" feature that allows users to play other users' games as soon as they're made publicly available. These three parts are linked by Roblox's virtual currency, Robux, that can be acquired either through in-game purchases or by paying a subscription fee. As of April 2015, the platform is free to play, with in-game purchases available through a virtual currency called Robux. Users can purchase additional virtual currency for real money using a credit card, PayPal account, or mobile device. The site has been criticized for its use of microtransactions, with parent company Roblox Corporation stating that microtransactions are not in their plans; this is in contrast to Roblox's previous statement in 2012 that the company would never use real-world money. The main game, known as "Free-to-Play," is available to all users, while "Premium" and "Developer" accounts allow additional features and improvements. In January 2013, Roblox released "Luxury," a "premium" product, which included "premium" developer accounts, and other features. In March 2013, it was announced that in December of that year, Roblox would begin allowing players to earn Robux through achievements in the game, and they would eventually allow the ability to spend the currency in a wider variety of games. In March 2014, the company announced the other premium service, Luxury Labs, which introduced new games and features. The move included the option to have your game hosted on a cloud server, and the facility to generate revenue through "premium" services. They also released a multiplayer expansion to the "Free-to-Play" game, Adventure.
