If you want to give a different color to a specific link then you need to change its href. Note : if you are going to use CSS for styling then you can make use of text-decoration: none; for removing underline of the link. Link: In many parts of the world, a significant percentage of infants are born with detectable congenital cataracts. Congenital cataracts are a common cause of infant blindness, yet very little is known about the basic pathogenetic mechanisms involved. In recent years, a number of studies have suggested a role for the transforming growth factor beta (TGF-beta) in controlling the growth of the embryonic lens. TGF-beta is a potent inhibitor of proliferation and is also known to stimulate the differentiation of lens cells. The purpose of this study is to determine whether an imbalance between the two effects of TGF-beta on the lens, proliferation versus differentiation, is an integral part of the development of congenital cataracts. The PI's laboratory is uniquely placed to undertake this study because of the expertise they have in the study of TGF-beta in the lens and the neonatal rabbit. A number of previous studies indicate that TGF-beta may be involved in the development of congenital cataracts. However, these studies did not directly test the effect of TGF-beta on the lens. The PI's laboratory has now developed a model of congenital cataract. This laboratory has also recently shown that TGF-beta mediates its effects through its interaction with the two TGF-beta receptors (TbetaR-I and TbetaR-II). In addition, they have
