PROJECT\_NUMBER=\$1 BUILD\_NUMBER=\$2 IMAGE\_URL=\$3 I need to pass the variables to a curl command that will add the "-t" and "-r" options to the current URL and then execute curl: curl -t --insecure -r -u user:password \ "" I've tried various different versions of the curl command with the following: curl -t --insecure -r -u user:password \ "" curl -t --insecure -r -u

---

user:password "" And: curl -t --insecure -r -u user:password ""  
But none of them seem to be executing correctly. I'm trying to  
mimic the setup in the aws-pipelines-credentials page but if I  
replace the variables in that script with "us-west-2", "prod" and  
"production-images" it seems to work. What am I doing wrong?
