Construction Cost Guide 2013 The following table provides total cost of work estimates for a range of selected building types, including building Cost GuideÂ .Q: How to convert a string into a variable? I want to convert a string like """, ""+ "" into a variable. This is what I have tried. var str=' ""', ""+ "" I want it to be in a variable so that I can assign it to a variable and other computations I have searched but have not come across any solution. A: The issue is that you're using single quotes to escape the string, and thus it's turning into a single string (it's literally """, just like the question you posted). Change it to double quotes, like so: var str = """, ""+ "" "; Since a single quote is the only character in a string that's often used to mark the start and end of a string, and the only character that should be escaped when you're using double quotes, you can use that to your advantage here. You can also escape the backslash, like so: var str = ""\x27\x27 ', "" \x27\x27 \x27\x27 \x27 \x27 \x27 \x27 \x c6a93da74d
