it would be remiss of us not to acknowledge air traffic controller airport hero's biggest strength as a game and that is its tight level design. in fact, this game is largely composed of levels that are just a single building or a single runway. although some of the game's levels can be very difficult, the sense of achievement is largely held in check by the fact that there is nothing to fight for, outside of the efforts to clear the tower and maybe a few bonus levels. if air traffic controller airport hero had a weakness, it is that some of the buildings are hard to spot. some of the tower buildings, in particular, are almost invisible in certain lighting conditions. this is, of course, a deliberate choice to make the game as authentic as possible, but it can make it very difficult to find the hidden bonus areas for extra points. even if the player does have a map available, the game's insistence that the player check in with controllers every three minutes can be a real time-sink. the developer, voofoo studios, is the same group that brought us air traffic controller airport hero. while that game was focused more on the practicality of the game's controls, air traffic controller airport hero's ambition is a bit loftier, in that it presents a virtual world of the airport, with each level being a real-life airport. this time, the aim is to control the flow of aircraft arriving at a given airport, and the demand for this service can be tracked through a simple presentation of the number of arrivals and departures. on the downside, it's not a very easy game to pick up, and may be too complex for some players. the difficulty of the game varies significantly with the player. in fact, in my experience, the game is much harder than most other similar games. the training missions are particularly tough, and you'll find yourself having to retrain your brain on how to behave as a controller at several points in the game. this time, the game also requires that you check in with controllers every three minutes or less, and the problem is that this means that flying through a level can be a real time-sink. at the same time, this level of detail is what makes the game so authentic.

YEARS, YEARS AND MORE YEARS of continuous efforts to address known hazards in the national airspace system (NAS) and to respond to issues illuminated by analysis of incidents and accidents have made commercial airlines the safest mode of transportation. The task of maintaining a high level of safety for commercial airlines is complicated by the dynamic nature of the NAS. The number of flights by commercial transports is increasing; air traffic control systems and procedures are being modernized to increase the capacity and efficiency of the NAS; increasingly autonomous systems are being developed for aircraft and ground systems, and small aircraft most notably unmanned aircraft systems are becoming much more prevalent. As the NAS evolves to accommodate these changes, aviation safety programs will also need to evolve to

ensure that changes to the NAS do not inadvertently introduce new risks. Although there's plenty of downtime at the start of each stage, as planes travel inbound or begin to make radio contact once they're filled with passengers (a fast-forward option would have helped here), Narita attempts to make the most out of these moments. Radio chatter endows the game with a sense of realism as sampled pilot voices fill the frequency for requests and flight attendants can be heard issuing instructions to passengers. Since English is the international language of aviation, stateside players will be able to appreciate the level of detail that went into Air Traffic Controller Airport Hero's conversations. Just as it shouldn't be a surprise that Air Traffic Controller Airport Hero can make you feel like you're controlling a plane, there will be times when you're put into one of Narita's unexpected scenarios. For example, a plane's suddenness at touchdown, the

danger posed by an approaching plane in a low visibility period, a detailed obstruction course or the need to calculate an approach that requires a crosswind.
