thanks for the help. i have a question. i have a system and i need to use a key to activate office. i am able to select office to be installed through my vlsc. the problem is when i run the vlsc file it says that the key is no longer valid and i have to purchase a new one. when i go to the shop to purchase a new key i see that there is only one product (2017 office) available. i need to be able to install 2016 office on the system. i have looked in the registry but i dont see where i can select a different product. is there another key i need to install? i have been trying to activate the

office 2016 kms key on a windows 10 client. i have the office 2016 kms key, the vlsc file and the slmgr.vbs file on a usb. when i run the slmgr.vbs file it says "product key is not valid". so i go to the vlsc file and try to activate, but it tells me that the product key is no longer valid. hi, i have a user that's using office 2016 kms. they have a kms key on a usb key, and they can activate their office 2016 license on the clients that are running windows 8.1, windows 10, etc. the problem comes when i'm trying to activate office 2016 on windows 7. the error i receive is "the product key is not valid." the message is not very informative. hi. this is my second attempt to activate office. i have the original office kms key. the first activation of office kms worked just fine. the second activation is not working. i'm not sure what the difference is between the two activations. here is the failure message: "the specified product key was not found"

please be aware that the activation of windows and office products depends on the following factors: the os version of your computer the version of the kms server that you use whether your kms server is supported by the version of windows and office the type of activation that you use (kms, volume key, gvlk) the number of office licenses that you have and that you want to be activated whether the office product key that you want to use is public or secret
