Im also loving the rounded, premium design that seems to be Sony hallmark, and the Xperia 5 II's lightweight body feels premium in the hand. Ive tossed the phone through the air, tilted it on its side, and never once felt the phone begin to flex or feel out of alignment. Two years ago, the Xperia 5 was no slouch itself. The 5 displayed some of the best battery life of any Android phone Ive used, and Im a fan of the compact, edge-to-edge displays Sony has been perfecting. However, the Xperia 1 II might finally be the phone that breaks through, with the flexible glass curves bringing a design element to the forefront to make it into a standout handset. At under \$1,000, its not just a great phone, its one thats worth the leap of faith. The best part is, when youre done using its edge screen, you can dock the phone back into the watch as a regular old smartwatch. Its a great solution and it really shows Sony is constantly updating its offering - rather than just becoming stagnant like so many other handset makers. The Xperia 5 II's camera also offers a slight boost over the Xperia 5 of the past. Theres a Telephoto

lens, a hybrid autofocus system, and a 12MP main camera with a F/2.0 aperture, and 8MP front-facing selfie shooter. This setup will get you great details in darker, darker scenes, and even respectable photos at night with good light, but its not perfect. The Sony Xperia 5 III camera will definitely come in handy in many situation; however, there are plenty of phones in this price bracket that excel when it comes to front and rear camera photography.
