AutoCAD Architecture 2016 32bit Activator Download Autocad. I have the following model;

Category name	parent_id	Page slug	id	title
---------------	-----------	-----------	----	-------

I want to return a list of pages in the following format; Category (name), Page (title), parent_id Where ID may be present in Category. Currently I have: `$pages = $this->Category->find('list', ['conditions' => ['Page.slug' => $slug, 'parent_id' => $this->Category->id]])`; This sort of works but returns; Category (name), Page (title), id And I also want the parent_id to be an ID.

I am getting the data through this to populate the selectbox;

```
Form->create($page)> Form->control('id', ['options' => $this f30f4ceada 5ec8ef588b
```
