The second option, Flatten All, lets you quickly output all visible layers of a PSD file at once. In previous versions of Photoshop, you could flatten just one layer at a time. With the new option, expand the Layers panel and select the flatten button at the bottom of the panel, then click Merge Visible Layers. You can also press the button in the Layers panel. Editor.com has reviewed the version 1.7 addition to Adobe Photoshop's biggest feature since version 1.0—the new Content-Aware Fill. This one-click solution enables users to get rid of unwanted objects throughout their images along with fill and cloning adjustments for a faster workflow. You can quickly load the new Content-Aware Patch tool or the Content-Aware Move tool. But we found that you can also load the Content-Aware tool with a press of the C key, and the tool will display the Content-Aware Brush, which you can use to paint on top of unwanted areas. You can also add the tool's brush as a brush preset, by opting to save your brush as a preset. We also liked the option to create up to eight artboards (C key) and how the Auto-Align Floating tool resizes smartly while keeping the alignment intact. We like how Content-Aware Fill ranks images with the location a background of the image, and in the Content-Aware mode, the history saving options are integrated seamlessly. The first new tool launched in version 1.7 is the Threshold Clone Tool, an improvement to the Cloning tool, but the major addition is the Content-Aware Healing tool that covers two options: Content-Aware lense remedies the problem without user intervention, and allows the user to quickly artifact-fixes any content in an image. Last but not least is the Content-Aware Stamp tool, which brings to the user's attention an image's similarity to a reference image, so you can quickly try the stamp or just make a small adjustment to the images.
