Meet the Adobe Photoshop Movie Maker, a stripped-down version of the professional editing and creation suite known only by its full name, Photoshop Creative Cloud. It's the first wave of Photoshop extensions that have broadened the application's reach outside of its professional realm, like the more streamlined profile in Elements, to projects that are more artistic and creative. It's also a further lowering of the barrier to entry for the casual photographer, whether or not the desired creative output involves photos or video. With a quickly growing roster of extensions, a fairly extensive feature set, and a price tag of $20 per month for desktop users and $50 per month for the desktop, mobile and online services versions, you could make a very good case for the PS Movie Maker as a less pricey avenue to Photoshop's professional-grade tools. In this review I take a look at the file outputs and features of the latest version. **BELOW:** An example of a 4K video imported into the video editor. You can access the settings and options via the tools button (in the upper left) and then from the step-by-step editor. Once you have the software installed on your computer and your preferred settings set, it's as easy as pulling images from the apps you need to edit, importing the clips and galleries you'd like into the project, and setting the video. The sequence editor is where you begin, depending on which version of the software you own. The more flexible version offers a timeline in addition to full-screen control, designed to allow you to mix photos, video and audio clips with as much creative freedom as possible. You can add music, special effects and even hand-drawn video clips to videos. Classic tools let you zoom in and crop photos to your liking, an operation that can take up to a minute. You can also give your finished project a title, and retain the original file name. You determine the resolution that can be used for the finished project. If the sources look good enough, you can also share the project on social media (and get started on the conversion to Facebook Movie).
