Other new features include the Watercolor Brush, Pencil Tool, New Effects, Art Textures, Predefined Curves Adjustment Layer, and a Split Toning feature. The Watercolor Brush changes colors by pulling colors from the layer below and applying it where you click and moves the brush to similar colors. It comes with a pressure sensitive Pressure Control, a Dynamic Stroke Options, and a Smudge the Brush Effects. You can even add artificial brush strokes to your images. The default Free Transform tool has been replaced with three more complex options. The first is Perspective Crop. There's a new Lens Correction tool, which corrects for minor lens effects. The Insertion Lens lets you draw the insertion point where the lens is focused. There is the Quick Fix option to fix lens problems in one easy step. The most diverse tool is the Crop tool, which lets you change three different aspect ratios. You select them by clicking the little orange frames. The selection frame automatically changes to suit the selected option. You can judge the results by viewing the preview window. These tools, in addition to a few new Styles, can be used to create greatly altered images. In addition, it can import photos from RAW files (presumably those taken from a digital camera) and you can add rows of effects onto your image, such as Frames, Pixelate, or Mosaic. There is a little script icon next to the Undo and Redo buttons. You can extend it to open a menu, listing to choose which Undo options you want to keep. To erase unwanted presets, you can simply click on the Script icon and get a menu where you can choose which projects to erase the presets from. This isn't something I can use a lot, but it always comes in handy.
